## Course overview

### Optical waveguide theory

- A Photonics / integrated optics; theory, motto; phenomena, introductory examples.
- B Brush up on mathematical tools.
- C Maxwell equations, different formulations, interfaces, energy and power flow.
- D Classes of simulation tasks: scattering problems, mode analysis, resonance problems.
- E Normal modes of dielectric optical waveguides, mode interference.
- F Examples for dielectric optical waveguides.
- G Waveguide discontinuities & circuits, scattering matrices, reciprocal circuits.
- H Bent optical waveguides; whispering gallery resonances; circular microresonators.
- I Coupled mode theory, perturbation theory.
  - Hybrid analytical / numerical coupled mode theory.
- J A touch of photonic crystals; a touch of plasmonics.
  - Oblique semi-guided waves: 2-D integrated optics.
  - Summary, concluding remarks.

### 2-D waveguide configurations

$\epsilon \in \mathbb{R}, \mu = 1, \sim \exp(i\omega t)$  (FD)

- 2-D waveguide, 1-D cross section.
- Permittivity  $\epsilon = n^2$ , refractive index  $n(x)$ . (1-D waveguide)

- $\partial_y \epsilon = 0 \iff \partial_y \mathbf{E} = 0, \partial_y \mathbf{H} = 0$ , 2-D TE/TM setting.
- $\partial_z \epsilon = 0 \iff$  Modal solutions that vary harmonically with  $z$ :

$$\begin{pmatrix} \mathbf{E} \\ \mathbf{H} \end{pmatrix} (x, z) = \begin{pmatrix} \bar{\mathbf{E}} \\ \bar{\mathbf{H}} \end{pmatrix} (x) e^{-i\beta z}, \quad \begin{array}{l} \text{mode profile } \bar{\mathbf{E}}, \bar{\mathbf{H}}, \\ \text{propagation constant } \beta, \\ \text{effective index } n_{\text{eff}} = \beta/k. \end{array}$$

(TE): principal component  $\bar{E}_y$ ,  $\partial_x^2 \bar{E}_y + (k^2 \epsilon - \beta^2) \bar{E}_y = 0$ ,  
 $\bar{E}_x = 0, \bar{E}_z = 0, \bar{H}_x = \frac{-\beta}{\omega \mu_0} \bar{E}_y, \bar{H}_y = 0, \bar{H}_z = \frac{i}{\omega \mu_0} \partial_x \bar{E}_y$ ,  
 $\bar{E}_y$  &  $\partial_x \bar{E}_y$  continuous at dielectric interfaces.

## Dielectric multilayer slab waveguide, nodal properties

(Fixed polarization, TE/TM.)

$$\partial_x(\partial_x\phi) = -(k^2 n^2 - \beta^2)\phi.$$

$k^2 n^2 - \beta^2$  determines the rate of change of the slope of  $\phi$ .

Imagine a numerical ODE algorithm of "shooting-type".

- Guided modes with a growing number of nodes ( $x$  with  $\phi(x) = 0$ ) with decreasing effective indices

↔ mode indices = number of nodes in  $\phi$ .

"Quantum numbers".

- A **fundamental mode** with zero nodes and highest effective index.
- Modes of the same polarization are **non-degenerate**.

### 3-layer slab waveguide, dispersion curves

Remarks / observations:

- At large core thicknesses, or short wavelengths, for all modes:  $n_{\text{eff}}$  approaches the level  $n_f$  of bulk waves in the core material.
- Modes of higher order at the same  $n_{\text{eff}}$  supported by waveguides with thickness increased by specific distances.

Guided mode, layer  $l$  with  $\kappa_l^2 = (k^2 n^2 - \beta^2) > 0$ , field  $\phi(x) \sim \cos(\kappa_l x + \chi)$  for  $x \in$  layer  $l$ ;  
increase layer thickness by  $\Delta x = \pi / \kappa_l$ , such that  $\kappa_l(x + \Delta x) = \kappa_l x + \pi$   
→ the thicker waveguide supports a mode of order  $+1$  with the same propagation constant.

- Cutoff thicknesses at fixed wavelength.

Nonsymmetric 3-layer waveguide  $n_s \neq n_c$ : There exist cutoff thicknesses for all modes.  
Symmetric 3-layer waveguide  $n_s = n_c$ : Cutoff thicknesses exist for all modes of order  $\geq 1$ ,  
no cutoff thickness for the fundamental TE/TM modes.

- $\lambda$  is the “length-defining” quantity; wavelength scaling, factor  $a$ :  
 $n_{\text{eff}}(\lambda, d) = n_{\text{eff}}(a\lambda, ad)$ ,  $\beta(\lambda, d) = a^{-1} \beta(a\lambda, ad)$ .

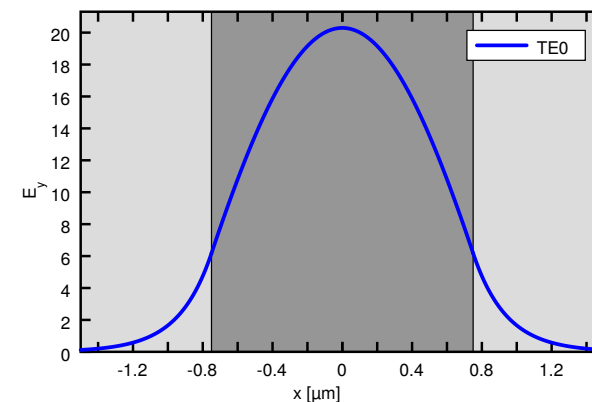

- Cutoff wavelengths for waveguides with fixed thickness.

For all modes; exception: no cutoff wavelength for the fundamental TE/TM modes in a symmetric 3-layer waveguide.

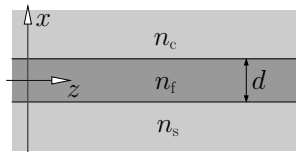

### 3-layer slab waveguide, mode confinement

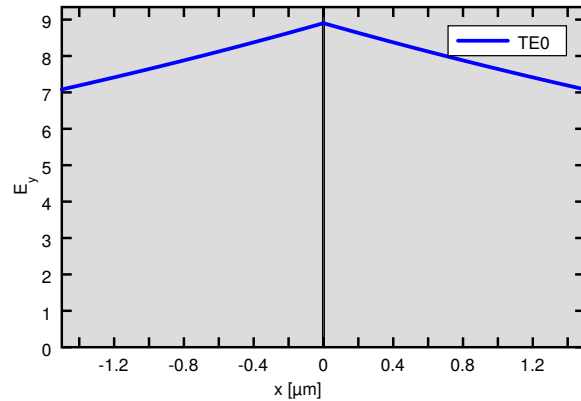

Symmetric waveguide,  
moderate refractive index contrast,  
 $n_s = 1.45, n_f = 1.99, n_c = 1.45, \lambda = 1.55 \mu\text{m}$ ,

### 3-layer slab waveguide, ray model

Field in the core:

$$\sim a_u e^{-i(\kappa x + \beta z)} + a_d e^{-i(-\kappa x + \beta z)}, \quad k^2 n_f^2 = \beta^2 + \kappa^2$$

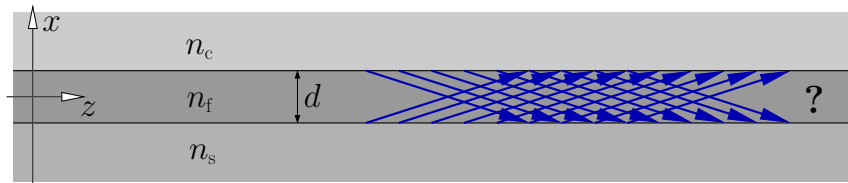

propagation angle  $\theta$  with  $\beta = kn_f \cos \theta$ ,  $\kappa = kn_f \sin \theta$ .

Guided mode formation:

- Repeated total internal reflection of waves in the core at upper and lower interfaces
- Calculate optical phase gain, including phase jumps for reflection at interfaces (polarization dependent).
- Phase gain of  $2\pi$  for one "round trip", "transverse resonance condition"  $\leftrightarrow$  constructive interference of waves.

(A frequently encountered intuitive model . . . of very limited applicability.)

### 3-D waveguides

Cross sections (2-D) of typical integrated-optical waveguides.

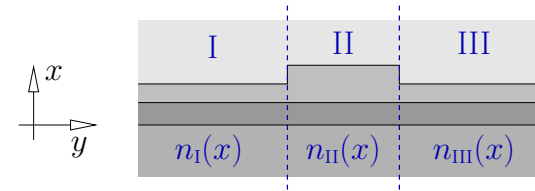

### 3-D rectangular waveguides

No analytical solutions:

- numerical mode solvers.
- approximations.

### Effective index method

Outline:

- Divide into slices  $\rho = I, II, III$ :  $n(x, y) = n_\rho(x)$ , if  $y \in \text{slice } \rho$ .
- Compute polarized modes  $X_\rho(x), \beta_\rho$ ,  $X_\rho'' + (k^2 n_\rho^2 - \beta_\rho^2)X_\rho = 0$ ,  $N_\rho = \beta_\rho/k$ .
- Consider a scalar mode equation for the principal component  $\Psi$  of the 3-D waveguide

$$\partial_x^2 \Psi + \partial_y^2 \Psi + (k^2 n^2 - \beta^2) \Psi = 0, \quad \Psi = E_y \text{ (TE)}, \quad \Psi = H_y \text{ (TM)}.$$

- Ansatz:  $\Psi(x, y) = X_\rho(x) Y(y)$ , if  $y \in \text{slice } \rho$ ; require continuity of  $Y$  and  $Y'$ .
- **Effective index profile:**  $N(y) := N_\rho$ , if  $y \in \text{slice } \rho$ .

### Effective index method, schematically

Remarks / issues:

- A popular, quite intuitive method.
- Frequently an (often informal) basis for discussion of waveguide properties.
- $\leftrightarrow$  Relevance of the slab waveguide model.
- Manifold variants / ways of improvements exist.
- What if a slice does not support a guided slab mode?
- What about higher order modes?
- How to evaluate modal fields? What about other than principal components?
- ...

### Variational effective index method
